Paper reference, unchanged: clean-test router ability (AUROC ×100). Entries report mean ± sample SD across three evaluation rounds. Protocol differs from the strict 5,955 tables: 5,954 subset, historical greedy + sampled 42/43, changed local answers. Not strictly matched to StartLux 5,955; do not compare directly or combine ranks.

Values copied exactly from the current paper tables (table1_auroc.tex, table2_bq.tex, table3_tc.tex); no cell was changed.
Protocol: 5,954 subset; historical greedy + sampled 42/43 rounds; changed local answers.
Not strictly matched to the 5,955 StartLux protocol. Do not compare directly with MAIN_TABLES.md or combine ranks.

**Protocol difference (why this is a separate reference)**

Subset is 5,954 requests, not the strict 5,955 clean split.
Historical greedy + sampled 42/43 rounds; local answers changed.
Exact paper values only. Do not compare directly with the strict table or combine ranks.

Paper reference, unchanged: BQ at the middle budget range, as percentages of all-cloud quality; higher is better. Entries report mean ± sample SD across three evaluation rounds. Protocol differs from the strict 5,955 tables: 5,954 subset, historical greedy + sampled 42/43, changed local answers. Not strictly matched to StartLux 5,955; do not compare directly or combine ranks.
